上海弗列加已经启动CFD项目，并正在逐步推进CFD Analysis-Led (CFD分析引导设计) 设计方法。

CFD(Computational Fluid Dynamics)计算流体力学分析可以获得流场内各个位置上的速度、温度、压力、浓度等的分布，以及这些量随时间的变化情况。CFD分析通过模拟实验的方法减少实验调试次数，加快产品开发周期，降低开发成本。因此，CFD在工程应用方面得到了快速的发展，尤其在汽车及零部件行业得到了广泛的应用并且已经成为汽车及零部件领域技术应用的趋势。

上海弗列加将在液体滤清器和气体滤清器的开发中逐步推行CFD分析方法并加大CFD应用的力度，努力通过“分析引导设计”的理念为客户缩短产品开发周期及降低成本做出我们的贡献。

CFD-Analysis-Led Design Project has been launched and being progressing rapidly in ShangHai Fleetguard.

CFD(Computational Fluid Dynamics) analysis could display the steady or transient distribution of parameters like velocity, pressure, temperature and concentration in a flow field. CFD analysis can greatly accelerate the product development process and reduce the cost though modeling a real experiment quickly. Thus, CFD has got rapid progress and become trend in practical engineering, especially in automobile and parts industry.

ShangHai Fleetguard will vigorously promote CFD-Analysis Led Design in both liquid and air cleaner development, through which, we can help our customers cut down the cost and lead time.
